

PROTECT YOUR MOST VALUABLE ASSETS

DISASTER RECOVERY AS A SERVICE FROM EAGLE

If a disaster hits, whether man-made or natural, can your business survive any length of outage? Your IT disaster recovery (DR) strategy is a top priority. You need a reliable solution that is set in motion with speed and agility. A successful disaster recovery solution safeguards critical business data, allows you to maintain productivity, and reduces financial loss caused by the outage. DR is a basic need for any business that wants to stay in business. Eagle Datagistics provides the expertise you need before, during and after a disaster strikes.

But DR alone only addresses your ability to recover (usually from backups), not how long it takes, or the potentially lost data between backups. That's why Eagle recommends DR solutions that include business continuity (BC) mechanisms, such as one or more hot failover environments, and a more comprehensive plan outlining how and when to failover, including defined roles and responsibilities of all involved.

DR/BC Solutions from Eagle deliver the capability to manage and recover critical data and business functions in a pre-planned manner that meets recovery time objectives (RTO) and recovery point objectives (RPO). In addition, with disaster recovery as a service (DRaaS) you have the peace of mind that all of your environments are securely hosted offsite; your infrastructure is being maintained and updated in a timely manner; your internal IT staff can focus on other business critical projects; and you will experience lower infrastructure investment costs. And for businesses that need to meet compliance standards (HIPAA, PCI, e-Discovery, SOX, etc.), this is essential.

DISASTER RECOVERY THROUGH EAGLE'S ONTRACK™ COMPLETE

Disaster can come in the form of systems failures, human error, viruses, malicious attacks as well as natural disasters. Eagle's OnTrack Complete is a business continuity solution that not only prevents disasters and associated risks, but also provides a hot failover environment in the event of an incident.

With OnTrack Complete, Eagle will:

- Help you clearly define your RPO and RTO
- Perform and manage all backups
- Develop and implement a customized disaster recovery strategy, including process, procedures, communications plans, and checklists
- Set up replication and failover to a secure offsite location in either our datacenter or yours
- Manage primary and failover databases including log shipping and apply processes
- Annual DR testing
- 24x7 response from the Eagle team

WHY EAGLE FOR YOUR DR/BC SOLUTION

Managing your DR/BC solution is a 24/7 job. And it's a priority that can't be ignored. But when you are also responsible for countless other elements of your database including new projects, security, compliance and audit, licensing, and performance, it can be difficult to stay on top of. Even if you have the expertise, you may not have the time to develop, maintain, and monitor the solution that protects your most valuable assets when disaster strikes. We get it. That's why Eagle Datagistics specializes in providing top level DR/BC services to organizations of all sizes. We have expertise in multiple database versions (Oracle, MySQL, SQL Server) and a wide variety of application platforms.

Eagle's experts are here to help you plan for, prevent and overcome failures that could cause data loss and downtime. Put our many years of designing, building, and managing highly available, mission-critical systems to work for you. With Eagle you get more support, more expertise and more performance.

Research states:

Gartner predicts that by 2018 the number of organizations using disaster recovery as a service (DRaaS) will exceed the number of organizations using traditional, syndicated recovery services. ([Gartner, April 2015](#))
